

5 **ABSTRACT OF THE DISCLOSURE**

10 A method and user interface which enables the setting of a variable value feature,
having a plurality of values associated therewith, wherein the plurality of values include a
default value and a plurality of non-default values. The method and user interface
displays a first value associated with a user selected variable value feature and changes
15 the displayed first value associated with the selected variable value feature by a
predetermined amount so as to display a second value associated with the selected
variable value feature by a user engaging a user activatable area associated with the
selected variable value feature. The method and user interface determines if an annotated
message is associated with the displayed second value associated with the selected
15 variable value feature and displays the annotated message associated with the selected
variable value feature along with the displayed second value associated with the selected
variable value feature when it is determined that the displayed second value associated
with the selected variable value feature has an associated annotation message.
